

E-Z DUNGEONS

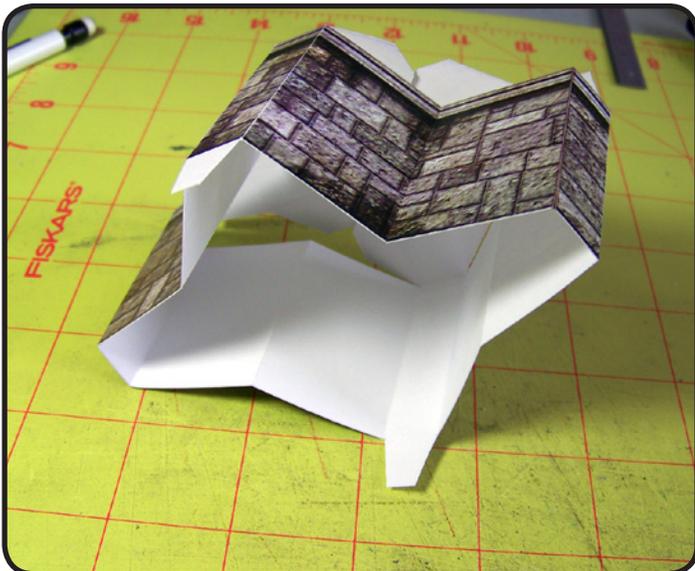

Wall Intersections ('T', 'L' and 'X' styles)

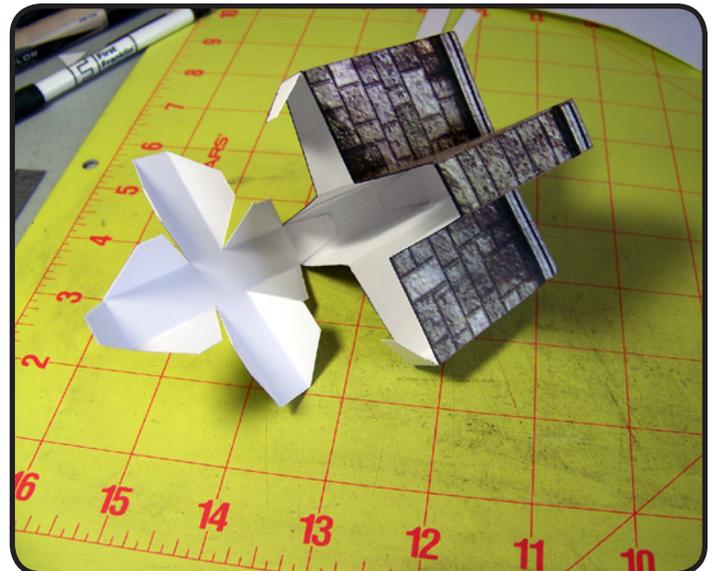

All of the intersection models ('T', 'L' and 'X' shapes) assemble in the same way. After cutting, scoring and test folding your pieces, glue the side wall ends together ('T' intersection shown above.)

Finish gluing the side wall ends together until they form one continuous shape ('T' intersection shown above.)

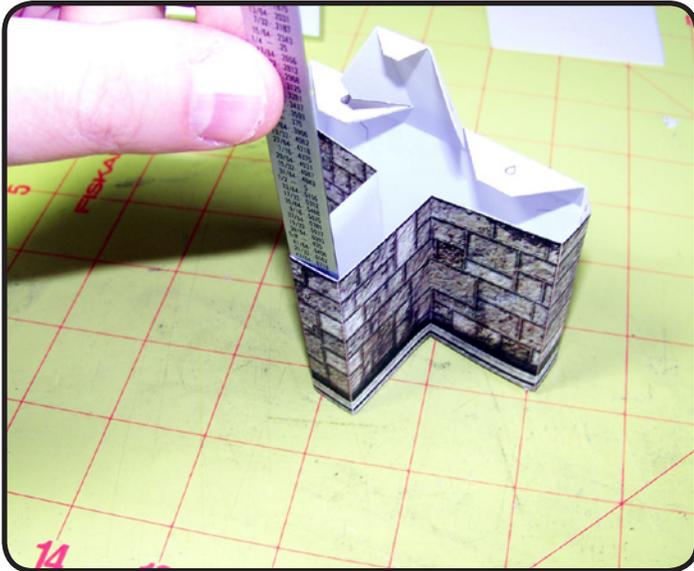

The 'X' or cross intersection walls need to be glued together like this before the top or bottom flaps can be glued.

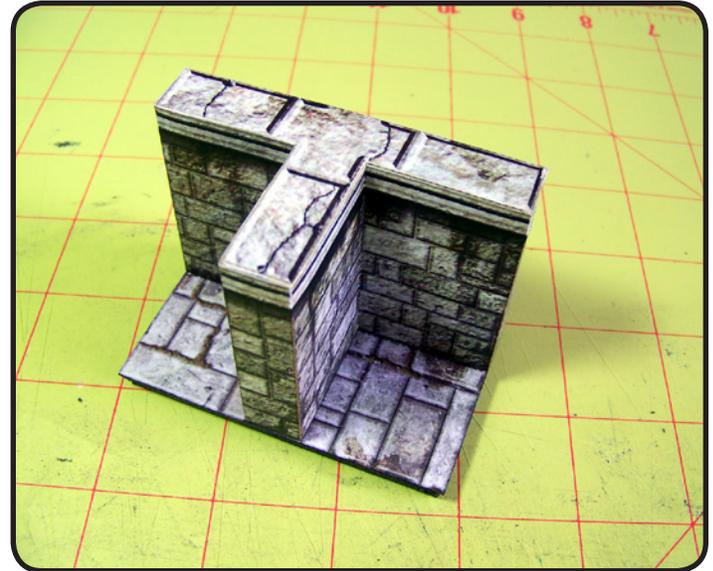

The bottom flap of the 'X' or cross intersection model needs to be attached at this time. Glue one end tab and allow to dry.

E-Z DUNGEONS

Always glue the top flap in place first. This is what people will see on the finished model and proper alignment is very important. Always flip the model upside down to ensure a flush fit with the side walls and allow you to insert a tool to apply pressure to internal tabs.

Finish by gluing the bottom flap in place, and then attaching to a floor piece if desired.
