

# E-Z DUNGEONS

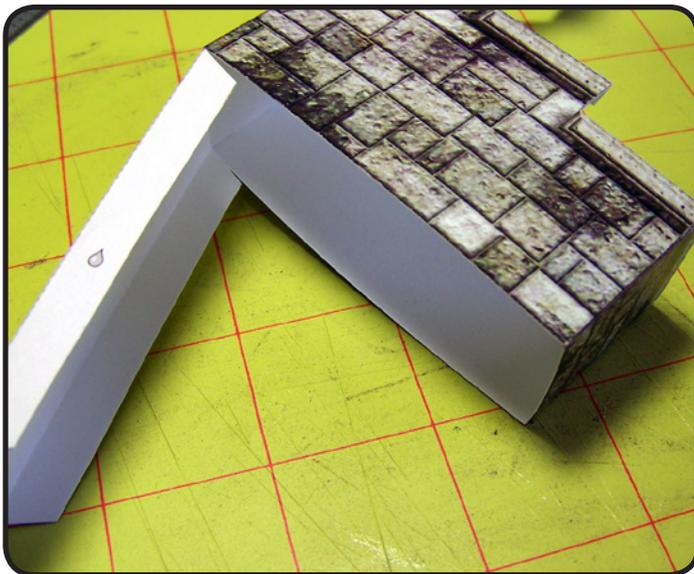

## Straight Stairs

Cut, score and test fold the model pieces as shown above. Both the tall and short models assemble in the same way.

Glue the bottom side to the main model first (only for the tall stair model.)

Fold and attach the ends of the side walls as shown above.

Glue the stair treads first, one at a time. Use a scrap of paper to apply glue. You can reach in through the bottom of the model to apply pressure to the internal tabs. Once the treads are finished, glue the bottom flap into place.
